**GRAZEX II contains up to 50% more seed per pound than any other Sorghum Sudangrass Hybrid. GRAZEX II produces very thick, vigorous stands of fine stemmed forage. Because of it's outstanding early growth potential, ruggedness, and wide area of adaptation, GRAZEX II is extensively utilized by the profit conscious livestock producer.**

We have grown and fed Grazex II on our ranch for 3 years. We have compared Grazex II to 3 or 4 other varieties of sorghum sudangrass hybrids. Grazex II has the best regrowth, as good or better overall yields and as good or better crude protein. It was comparable to NC+ Sweetleaf II in all respects however Grazex II is nearly 50% less expensive. We have harvested as much as 10 bales per acre (1400 to 1500 lbs. Per bale) on tolling terraced land. Grazex II is a favorite on our ranch.
